LUBRICANTS

VICTOR Autoöl und Additive
Victor International GmbH

Victor International GmbH provides VICTOR high-performance lubricants and additives designed for a broad spectrum of applications. Developed and manufactured in Germany under rigorous quality controls, our products comply with both national and international standards. Featuring advanced formulations that ensure optimal performance, environmental protection, and fuel efficiency, VICTOR lubricants and additives deliver the reliability and innovation customers can trust.

LUBRICANTS

Automotive Additives

VICTOR automotive additives are engineered to enhance vehicle performance while safeguarding critical components such as the engine, transmission, and fuel system. Developed and manufactured in Germany under rigorous quality standards, our additives are designed to reduce deposits, minimize wear, improve combustion efficiency, and extend service life. With advanced formulations focused on both performance and environmental responsibility, VICTOR additives deliver the cleanliness, protection, and efficiency drivers can consistently rely on.

Fuel System Cleaner

VICTOR Fuel System Cleaner is a high-performance solution designed for all types of gasoline engines, including those equipped with catalytic converters. It quickly and effectively cleans the entire fuel system by removing carbon, scale, tar, and other deposits from injectors and intake valves. Regular use restores or increases engine power, improves acceleration, and ensures smooth idling by eliminating uneven fuel supply. The cleaner also helps prevent new deposits from forming, ensuring consistent fuel injection, reducing fuel consumption, and maintaining long-term engine efficiency.

Fuel Injector Cleaner

VICTOR Fuel Injector Cleaner is a high-performance additive formulated to deliver thorough cleaning of critical fuel system components. It quickly and effectively removes carbon, scale, tar, and other deposits from injectors and intake valves, restoring or increasing engine power when performance has declined. By ensuring a more even fuel supply, it eliminates rough idling, starting difficulties, jerks, and poor acceleration caused by injector deposits. In addition, it helps prevent new contamination and buildup, extending injector life and improving fuel efficiency — ultimately saving both time and money.

Octane Booster

VICTOR Octane Booster is a high-performance additive designed to increase the octane rating of fuel, making it ideal for engines with higher octane requirements. It provides reliable protection for valve seats when operating on unleaded fuel, while enhancing both cold starts and full-load performance. By ensuring a stable and efficient combustion process, VICTOR Octane Booster delivers improved engine responsiveness, smoother operation, and long-term protection.

Catalytic System Cleaner

VICTOR Catalytic System Cleaner uses advanced additive technology to clean the entire fuel system, dissolving resin buildup and gummed carbon deposits on injectors, valves, lambda sensors, and catalytic converters. Suitable for both gasoline and diesel engines, it restores lost power, improves combustion, eliminates jerks and starting difficulties, and ensures smooth acceleration for long-term engine efficiency.

Engine Flush

VICTOR Engine Flush is a highly effective cleaning agent designed to remove sludge, soot, and carbon deposits from engine components, including the oil system. Its unique detergent-dispersing additives ensure safe and thorough purification, even from hard-to-reach areas such as the bottom of the engine. During the flushing process, the formulation provides reliable lubrication, preventing wear and protecting vital parts like oil pumps and filters. The result is a cleaner, more efficient oil system that supports engine longevity and consistent performance.

Engine Care & Protect

VICTOR Engine Care & Protect features a new, highly effective additive package that enhances the wear protection properties of all engine oils. Specially formulated for areas where the lubricating film is subjected to extreme stress, it ensures optimal lubrication, minimal wear, and extended engine life. Easy to use, it reduces friction, improves operational reliability at high temperatures, and protects against oil dilution caused by fuel — providing long-lasting protection for both the engine and its components.

Hydraulic Lifter Additive

VICTOR Hydraulic Lifter Additives is formulated with a high-performance package of advanced additives that improve the high-pressure resistance and wear protection of engine oils. During operation, it enhances lubrication properties, ensuring smoother function of hydraulic lifters while effectively eliminating disturbing rattle noises. By reducing friction and wear, it helps extend the service life of vital components. Suitable for both gasoline and diesel engines, this additive restores quiet engine performance, improves reliability under demanding conditions, and contributes to long-term efficiency.

Automatic Transmission Care

VICTOR Automatic Transmission Care & Protection is a specialized formula developed to the highest standards and manufacturer recommendations to enhance and safeguard modern transmission systems. It delivers excellent wear protection, optimized friction behavior, and outstanding lubrication properties, ensuring smooth, precise shifting with direct response and reliable acceleration. The formulation also provides superior corrosion protection, prevents frothing, and supports the cleaning effect of transmission fluid, helping maintain long-term performance and preventing premature wear.
